EDUCATION

JG University

IMSC IT, Data Science and Analytics

CGPA: 8.9/10.0 (up till the 3th semester)

July 2024-May 2026

Ahmedabad, Gujarat

SKILLS

Languages: C, Python, Java, Javascript, HTML, CSS, SQL, PHP, React

Frameworks: Pandas, Numpy, Tensorflow, scikit-learn

Databases: Microsoft SQL Server, MySQL, PostgreSQL, MongoDB

DevOps & Tools: VS Code, GitHub, Visual Studio, Postman, Linux, Jupyter Notebook, XAMPP, Wamp

WORK EXPERIENCE

. Web Development

May 2025 – June 2025

CS Vision

Remote

- Developed and implemented web applications using HTML, CSS, JavaScript, and PHP.
- Designed responsive and user-friendly web interfaces.
- Built dynamic website features and integrated backend functionality using PHP.
- Worked on front-end and back-end development to create complete web solutions.
- Improved website performance, functionality, and user experience.

PROJECTS

MakeMyFinance (A personal finance management app):

Dec 2025 – May 2026

- Developed a full-stack personal finance management platform to track expenses, manage budgets, set financial goals, and analyze spending patterns through interactive dashboards and reports.
- Integrated secure OTP-based authentication, receipt scanning, transaction tracking, portfolio management, and AI-driven financial insights to help users make smarter money decisions.
- Integrated analytics and automation features to improve visibility into user finances and make everyday financial tracking more efficient.
- Designed a user-friendly system that simplifies personal financial planning and provides data-driven suggestions for smarter financial decisions.

Full-Stack Web Application (Marketplace & Analytics):

Jan 2025 – May 2025

- Developed Agriman a full-stack agricultural marketplace using PHP, MySQL, HTML, CSS, Bootstrap and JavaScript, featuring product catalog, shopping cart, secure checkout, and server-side form processing.
- Implemented role-based dashboards for customers, sellers and admins, inventory CRUD, AJAX-driven filtering, order lifecycle with automated invoice/PDF generation, PHPMailer/SMS notifications, and MySQL backup/import workflows.

Thundercast — AI Weather Intelligence:

April 2025 – Oct 2025

- Developed an end-to-end AI weather prediction platform for near-term thunderstorm and gale detection.
- Built and trained machine-learning models to predict thunderstorms and windspeed, producing production-ready inference pipelines.
- Integrated backend microservices and REST APIs to serve model predictions and process incoming weather data.
- Designed interactive visualizations and user interfaces to display predictions, alerts, and station data for operational monitoring.
- Delivered a full-stack solution enabling automated alerts and structured prediction outputs for further analysis.
